Offices

Offices are a long-term commitment. This is a challenge to any organisation designing an IT infrastructure that can sustain a long office lease but economically support several generations of IT equipment.

As a vendor independent IT and audio visual consultancy, we help our clients invest in infrastructure and systems that provide both a platform for the long term and deliver measurable benefits such as improved space utilisation and staff productivity.

We are constantly reviewing the impact of technology trends on workplace design such as mobility, desktop virtualisation and cloud computing.

We design intuitive collaborative audio visual systems that help our clients' staff connect and solve challenges.

We have delivered robust IT and audio visual systems in headquarters, regional offices, campuses, training centres and trading floors, which are used daily across the globe.
